## [SDG6] Clean water and sanitation

### [6.2] Water consumption per personr

#### Description:

**100% of treated water consumed**-The main purposes of the university water resources included domestic water(100% of Tap water), irrigating water and landscape water, and experimental practice water ... etc. The use of domestic water was the largest amount, which flowed into sewage treatment plant on campus afterwards.

The overall total water consumption indicated less significant difference in the past three years, maintaining at around 200,000 kWh/year. The overall trend was slowing down (as shown in the table). The water intensity of 16.29 (mt/person/ year) reduced 7% in 2023, which was lower compared to 2022. This was lower than 23.36 (mt/person/year) per capita water consumption of national technical colleges (Source: reference value of daily water consumption per capita (LPCD) of government agencies and schools at all levels).
