

Hungkuang University and The Sustainable Development Goal

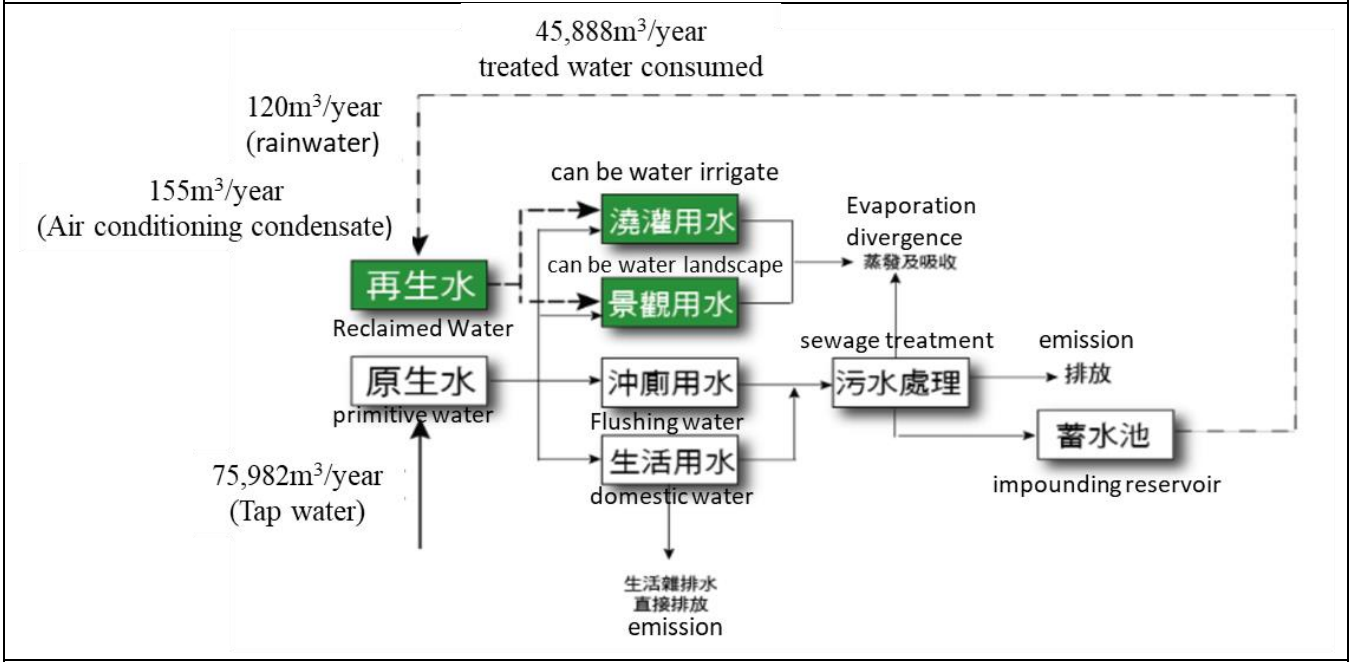

SDGs 6. Clean Water and Sanitation

[6.4] Water reuse

[6.4.2] Water reuse measurement

sewage treatment system and inspection reports

Water Recycling Program

Description:

The main purposes of the university water resources included domestic (i.e. flushing) water, irrigating water and landscape water, and experimental practice water ... etc. The use of domestic water was the largest amount, which flowed into sewage treatment plant on campus afterwards. The usage of water was balanced, as shown in the picture. A water meter is installed to measure the amount of rainwater that has been use. The recycled water also use for garden sprinkler system.
